

# DITCHES ARE DANGEROUS

It is important to play and swim in safe places. Ditches are dangerous—ditch banks can be very slippery and you can fall in. Even though the water may look calm on the surface, there can be strong currents and undertows beneath which can pull you under. Ditches can also have lots of dangerous things along their banks or on the bottoms — you could get cut or hurt you if you go into a ditch.

Circle **10** things that are dangerous in this ditch.
